

DECLARATION

I, Harvey Fletcher, being of sound mind, at the age of 94, on this 25th day of May, 1979, in the City of Provo, Utah, do make the following declaration of my own free will, to wit:

According to my memory, in the year 1928, while I was employed by Bell Telephone Labs in New York, I was invited with the approval of my employer to observe a demonstration of a device invented by T. Henry Moray of Salt Lake City, Utah. The device was contained in a small wooden box about 18" x 24" x 24" long, which I, personally inspected and determined that it was connected to no prime mover but only to an antenna and a ground.

The electrical load on the device consisted of 12 clear 75 Watt 110 Volt light bulbs and a 500 Watt electric flat iron, also 110 Volt. When the antenna and ground were connected, and certain adjustments made by the inventor, internal to the box, the loads were electrically operated. I was permitted to inspect the interior of the box and certain of the schematic drawings pertaining to the circuits involved in the device. I was not permitted to inspect a plug-in unit which was removed and held in the palm of the inventor's hand which he stated was the most proprietary part of the apparatus.

I did not know how the device functioned and do not know today, but I do know that it did function for the several hours of time that I observed it. I could discern no batteries, and could observe no other known methods of inducing electric power into the box or its loads.

Signed this 25th day of May, 1979.

Harvey Fletcher
